

Day #2

Task 1: System Architecture Overview.

3. Task

Define System Architecture Documentation:-

i) Overview:

The system architecture outlines the major components and their interactions within the marketplace ecosystem. It focuses on scalability, flexibility, and integration with external systems.

Components

Frontend: Will use Next.js for a fast, responsive, and scalable user interface.

- Responsible for displaying product listings, managing user interaction, and communicating with the backend via API routes.

Backend: Will use API routes in Next.js to handle server-side and Sanity CMS for content management (product, description, etc.)

Data Base: Sanity serves as a product data, orders, and user content.

Third Party API: Serves as a transaction handling and shipment tracking API.
